Abstracts

Global Data Centre Security Market is valued approximately USD 9.02 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 10.70 % over the forecast period 2020-2027. Data centre security is the pursuit of activities that make data centres highly secure against attacks and threats. The data centre is regarded as a critical resource for businesses, necessitating special security measures. The emergence of data centre security has aided in the optimal protection of sensitive information and applications through virtualized environments. . The increasing data center security threats, leakage of data, more traffic over network, shift towards cloud based infrastructure are the factors led to the adoption of Data Centre Security across the forecast period. For Instance: as per the government of India there was a spike of 300% cyber attacks in 2020 as compared to 2019 from 3,94,499 cases in 2019 to 11,58,208 in 2020. However, Lack of Service to the systems and high maintenance impedes the growth of the market over the forecast period of 2020-2027. Also, with the increasing DoS (Denial of Service) attacks the adoption, protection of data breaches and frauds, & demand for Data Centre Security is likely to increase the market growth during the forecast period.

The regional analysis of global Data Centre Security market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the

World. Europe is the leading across the world in terms of market share owing to the growing internet users & affordability of digital services coupled with the well-established digital infrastructure.
