# **Abstracts**

Global Data centric Security Market is valued approximately at USD 3.5 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 23.1% over the forecast period 2021-2027. Global organizations are becoming more vulnerable to cyberthreats due to the emerging acceptance of digitization by companies and the rise of BYOD patterns. While having strong security mechanisms in place, the number of organizations are also vulnerable to cyberattacks. As a result, organizations are demanding stronger data protection policies and tactics. Data loss protection, data classification, cloud access, improved gateway monitoring, data tagging & watermarking, and encryption techniques are all part of the data-centric security strategy. Escalating demand for data-centric security solutions for cloud-based data security and rising risk on enterprise data due to exploitation of big data analytics are driving the market of data centric security. Furthermore, data security governance and the use of cutting-edge technologies such as big data, machine learning, and artificial intelligence are expected to drive data-centric security adoption over the projected period. For instance, according to a 2018 survey by IDG, a leading technology media company, 73 percent of enterprises have cloud-based software or networks, with another 17 percent planning to do so in the coming year. The data-centric protection market is expected to be driven by the growing need for large and small businesses to secure their data in the cloud. However, growing organization inconvenience for data

breaches may impede market growth over the forecast period of 2021-2027.

North America is dominating the market owing to the rise of cyber-attacks, government data-protection laws, and the widespread use of cloud-based services. Furthermore, companies have made substantial investments in data-centric technology systems in order to achieve a strategic edge and boost business operations. However, APAC has become one of the fastest-growing markets due to adoption of mobile devices in the region.
