## **Abstracts**

Global DDoS Protection and Mitigation Security Market is valued at approximately USDXX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. DDoS Protection and Mitigation Security is the process of safeguarding a targeted network or server from a distributed denial-of-service (DDoS) attack. This security service is specially designed network equipment or a cloud-based protection service that allows a targeted victim to mitigate the incoming threat. Increasing adoption for multi-vector DDoS attacks, growing demand for cloud-based and hybrid DDoS protection and mitigation solutions, and a rise in the number of strategic actions by the key market players are the several factors impelling the market demand across the globe. For instance, in April 2019, Eastwind acquired Netscout with the aim of expanding the company's security analytics. Likewise, in March 2019, Continent 8 Technologies Plc introduced the company's new Cloud WAF products which are powered by Fortinet, Inc., to deliver API, DDoS security, and web applications. Consequentially, a rising number of strategic movements such as mergers & acquisitions, product launches, portfolio expansion, etc. are exhibiting a positive influence on the global market growth. However, a shortage of security skills among security professionals and huge capital involved in the adoption of DDoS protection and mitigation security impede the growth of the market over the forecast period of 2022-2028. Also, the rise in the number of DDoS threats across the IoT ecosystem and

the growing need for DDoS defense solutions for the 5G ecosystem are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global DDoS Protection and Mitigation Security Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the rising inclination towards evading the incidences of cyber-attacks and commercial espionage, along with presence of leading market players. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the growing focus on developing cyber ecosystems, increasing adoption of cloud, as well as rising concern for data security among enterprises, would create lucrative growth prospects for the DDoS Protection and Mitigation Security Market across the Asia-Pacific region.
