Abstracts

Global Deep Brain Stimulation Devices Market is valued approximately at USD 0.9 billion in 2018 and is anticipated to grow with a healthy growth rate of more than 9.5% over the forecast period 2019-2026. Deep brain stimulation (DBS) is a surgical procedure used in the treatment of various neurological disorders such as debilitating motor symptoms of Parkinson's Disease (PD), essential tremor and dystonia. DBS therapy is generally advised to the patients who do not responding to medicines for at least five years. In this therapy, electrodes are inserted in particular area of affected brain, which delivers electrical impulses that control abnormal impulses. Further, this treatment is permitted by the U.S. Food and Drug Administration (FDA), for patients who cannot have epilepsy surgery, that separates or eliminates the part of the brain that causes seizures. Rise in prevalence of neurological disease such as Parkinson, surging investment for neurological R&D, and escalating demand for minimally invasive techniques due to enhanced patient outcomes are the few factors responsible for high CAGR of the market over the forecast period. According to study of Global Burden of Disease 2015, it is estimated that the prevalence of Parkinson's to be approximately 6.2 million people worldwide in 2015 and it would reach approximately 13 million people with Parkinson's by 2040. Also, numerous Parkinson's Disease Foundation reveals

that approximately 60,000 Americans are diagnosed with Parkinson's disease every year. This, in turn, is expected to accelerate the demand of deep brain Stimulation devices across the world. However, the availability of other treatment options such as drug therapies and surgeries and stringent regulatory framework are some major factors expected to impede the growth of global deep brain Stimulation devices market over the forecast period.

The regional analysis of global Deep Brain Stimulation Devices Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the increasing number of patients diagnosed with Parkinson, along with the wide availability of technologically advanced deep brain stimulation devices in the region. However, Asia-Pacific is anticipated to exhibit highest growth rate / CAGR over the forecast period, due to rising prevalence of neurodegenerative disorders aided with unmet demand for effective and long-term solutions in the region.
