Abstracts

Global Delivery Robot Market is valued approximately at USD 14.18 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 18.2% over the forecast period 2020-2027. A delivery Robot is a type of autonomous robot that is used to deliver goods. The advent of autonomous robots has brought a revolution in the delivery system market as they provide cheaper and efficient way of delivery. The market growth is primarily driven by increasing affordability and return on investment of an increasing variety of infrastructure-light robots, along with continuing needs for flexible and efficient automated fulfillment. Additionally, weight lifting capacity of these robots and increase in demand for last mile delivery are further anticipated to augment the growth of the market over the forecast period. For instance: in November 2019, MIT, US developed a last mile delivery robot. The robot is equipped with latest method of navigation system integrated into their robots. Moreover, the growing trend of online shopping across various regions of the world has escalated the demand for delivery systems. However, stringent regulation associated with the use of delivery robots may restrict the market growth.

The regional analysis of global Delivery Robot market is considered for the key regions
