Abstracts

Global Delumper Market is valued approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2021-2027. Delumper machines uses impact (shock or high impact for short period of time), shear(unbalanced vertical force on one side), compression, to reduce a variety of solid products to a desired particle size range. Many industries require size uniformity when blending, conveying, and packaging their finished products such as food products and molded plastics etc. Growing Construction industry and rising food and beverages sector, surging mining industry are key drivers for the growth of Delumper market. For instance: according to Global Construction Perspectives and Oxford Economics – Global Construction 2030 report –the volume of worldwide construction output will increase by 85% to USD 15.5 trillion by the year 2030. And 57% of all global growth will be driven by three countries – China, US and India. Also, with the increasing demand from end use industries and growing infrastructure development in emerging economies, the adoption & demand for Delumper is likely to increase the market growth during the forecast period. However, negative impact of covid 19 on end use industries and supply chain disruptions owing to covid 19 pandemic impede the growth of the market over the forecast period of 2021-2027.

The key regions considered for the global Delumper market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to increasing packaged food industry and growing construction sector in the region. Whereas, Asia-

Pacific is anticipated to exhibit highest growth rate / CAGR over the forecast period 2021-2027. Factors such as increasing infrastructure development in emerging countries in the region would create lucrative growth prospects for the Delumper market across Asia-Pacific region.
