## **Abstracts**

Global Dental Bridges Market is valued at approximately USD 1 billion in 2023 and is anticipated to grow with a healthy growth rate of around 5.5% over the forecast period 2024-2032. Dental bridges are restorative solutions for missing teeth, comprising artificial teeth anchored to adjacent natural teeth or implants. They restore dental function and aesthetics, preventing problems associated with tooth loss, such as shifting of remaining teeth and difficulty chewing. Bridges are made of various materials, including porcelain, metal alloys, or a combination, designed to match the natural teeth's appearance and provide long-lasting support for oral health.

The increasing prevalence of oral health issues, such as dental caries and tooth loss, drives market growth. Factors such as poor oral hygiene, consumption of sugary foods and beverages, and inadequate access to dental care contribute to the rising prevalence of these conditions. According to a study published by NCBI in 2020, in Kabul, periodontal disease was 39%, followed by caries at 20%, highlighting the need for dental restorative treatments. Furthermore, rising awareness of oral healthcare boosts market growth as individuals become more proactive in seeking dental treatments. The advancements in dental bridges involve the utilization of digital technologies such as computer-aided design/computer-aided manufacturing (CAD/CAM) systems and 3D printing to enhance the design, fabrication, and fitting process of these products. Technological advancements in dental materials and techniques enhance the bridge's durability and aesthetics. However, the high cost associated with dental bridges treatment, limited infrastructural facilities, and inadequate reimbursement scenarios in developing economies are significant barriers to market

growth.

The key regions considered for the Global Dental Bridges Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. Europe is a dominating region in the Global Dental Bridges Market in terms of revenue. The market growth in the area is being attributed to factors including the increasing preference for aesthetic prosthetic procedures owing to rising disposable income in developed countries augments growth. Whereas, the market in Asia Pacific is anticipated to grow at the fastest rate over the forecast period fueled by increasing patient visits and growing government initiatives to increase dental practices.
