Abstracts

Global Dental Burs and Endodontic Market is valued approximately USD 1.8 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5.25% over the forecast period 2021-2027. Dental burs refer to important tools essential for nearly every dental treatment and procedure. They are required for cutting, crushing, and removing hard and soft tissue of teeth and are intended to attach to the rotary dental handpiece for fast and effective dental work. Endodontics is the dental specialty that is associated with the pulp and nerves of the teeth. This specialty focuses on the finding, prevention and handling of diseases related to the pulp. The rise in geriatric population across the world, growing occurrence of dental related disease such as teeth loss, gum disease, dental crack, periodontal disease and dental cavities, coupled with rising demand of root canal surgery, is driving the Dental Burs and Endodontic Market. According to Global Burden of Disease Study in 2017, oral diseases affect close to 3.5 billion people worldwide, with caries of permanent teeth being the most common disease among adults. Severe gum disease, which results in tooth loss in severe cases, is also very common, with approximately 10% of the global population affected by it. In high-income countries, dental treatment averages 5% of total health expenditure and 20% of out-of-pocket health expenditure. The increasing expenditure on dental problems will propel the market further. The lack of awareness and willingness to get treatment for dental problems may act as a restraint for its growth. However, increasing efforts from government to make healthcare affordable to everyone worldwide acts as an opportunity for Dental Burs and Endodontic Market in subsequent decade.

Key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World are analysed to provide a holistic picture of Dental Burs and Endodontic Market. Due to better healthcare facilities as well as higher per capita income, North America has emerged as a significant region across the world in terms of market share. Whereas, Asia-Pacific is expected to exhibit the highest growth rate for the forecast period 2021-2027 owing to the growing crop geriatric population with dental disorders. Rising disposable income will also boost growth in this region.
