Abstracts

Global Depression Treatment Market is valued at approximately USDXX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Depression is a health condition in which an individual's mood is elevated or lower which causes a loss of interest and persistent feeling of sadness. Depression treatment includes medication, consulting therapy, or a combination of both. The rising incidences of depression worldwide, the growing need for therapies and antidepressants for curing mental conditions, coupled with increasing healthcare expenditure are the primary factors excelling the global market demand. For instance, according to Statista analysis, in 2020, nearly 2.1 million cases of depression among senior citizens were registered in India. Also, the figure is anticipated to rise and reach around 5 million cases of depression among senior citizens. Accordingly, the rapidly growing cases of depression among the global population are accelerating the demand for depression treatment, which is augmenting the market growth around the world. However, adverse effects of drugs and necessary gaps in treatment impede the growth of the market over the forecast period of 2022-2028. Also, the rising economic burden of mental disorders and the availability of a wide range of treatment options are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Depression Treatment Market study include

Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the rising prevalence of various depression and anxiety disorders, along with the availability of skilled professionals. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the growing population, as well as rising investment in the R&D activities for the development of antidepressant drugs, would create lucrative growth prospects for the Depression Treatment Market across the Asia-Pacific region.
