Abstracts

Global Desktop Virtualization Market is valued at approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Desktop virtualization is a software technology used to separate the personal computing desktop environment from a physical machine, by the usage of the client-server computing model. The growing expenditure on the adoption of cloud computing, rising emphasis on enhancing the productivity of employees, and increasing demand for simplified management and enhanced security (centralization of IT functions) are the several key factors fostering the market demand across the globe. For instance, as per the IEEE ComSoc in 2021, the public spending on cloud computing has reached USD 332.3 billion in 2021 with a rise of nearly 23.1% from USD 270 billion in 2020 around the world. Consequentially, the rising investment in cloud computing is directly associated with the demand for desktop virtualization, which, in turn, accelerates market growth in the near future. However, several system complexities and compatibility issues and a dearth of skilled personnel for implementation and

reconfiguration of desktop virtualization curb the growth of the market over the forecast period of 2022-2028. Also, the growing trend of workspace-as-a-service (WaaS) and rising inclination toward remote working are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Desktop Virtualization Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to rising acceptance of emerging technologies, along with growing investment in R&D activities. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the increasing demand for desktop virtualization solutions and services, and the growth of emerging countries such as South Korea, India, Japan, and China, would create lucrative growth prospects for the Desktop Virtualization Market across the Asia-Pacific region.
