Abstracts

Global Diagnostic Imaging Market is valued approximately at USD 26.6 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.7 % over the forecast period 2022-2029. Diagnostic Imaging is a technique which is used to conduct an extensive range of non-invasive imaging tests for monitoring and diagnosing injuries or diseases by the way of generating images that represent internal organs and structures in the patient's body. Healthcare practitioners are widely using this imaging technology to examine patients and make a diagnosis of their exact medical conditions. Rising demand for early disease diagnosis and expanding scope of clinical applications, increasing investments and funding by public-private organizations, constantly growing geriatric population and the subsequent increase in the prevalence of associated diseases such as cancer and gastrointestinal issues are the few factors responsible for high CAGR of the market over the forecast period.

For instance, according to the International Agency for Research on Cancer (IARC) - In 2020, it was estimated that there were 19.3 million new cancer cases and 10 million cancer deaths worldwide. The global burden of cancer is expected to grow to 27.5 million new cancer cases and 16.3 million cancer deaths by 2040 due to the growth and aging of the population. Thus, rising prevalence of cancer is resulting in surging the demand for diagnostic imaging around the world. Also, technological advancements in the diagnostic imaging industry along with increasing adoption of teleradiology are the major factor likely to offer lucrative growth opportunities to the market in the upcoming years. However, high cost of diagnostic imaging systems, shortage of helium availability and technological limitations associated with standalone systems are few factors

anticipated to restrain the growth of global Diagnostic Imaging market during the forecast period.

The regional analysis of global Diagnostic Imaging Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the dominant region across the world in terms of market share. The rising number of diagnostic centers, growing awareness about preventive care, rising prevalence of cancer & cardiac diseases and technological advancements in imaging technology in the region, create demand for Diagnostic Imaging. Whereas, Asia-Pacific is anticipated to exhibit the highest growth rate over the forecast period 2022-2029. Factors such as increasing prevalence of chronic disorders, expanding healthcare infrastructure, escalating investments in diagnostic imaging and enhancing reimbursement scenario would create lucrative growth opportunities for the Diagnostic Imaging market across Asia-Pacific region.
