Abstracts

Global Diathermy Equipment Market is valued at approximately USD 3.72 billion in 2023 and is anticipated to grow with a healthy growth rate of more than 10.21% over the forecast period 2024-2032. Diathermy Equipment refers to a category of medical devices used for therapeutic purposes, particularly in physiotherapy and rehabilitation. Diathermy utilizes high-frequency electromagnetic currents to generate heat within tissues, promoting various therapeutic effects such as pain relief, muscle relaxation, and improved circulation. Furthermore, the rising use of non-invasive adjunct therapy is gaining attention towards Global Diathermy Equipment Market. Diathermy, a treatment that involves the use of high-frequency electromagnetic currents to generate heat within body tissues, has been widely used in various medical fields such as physical therapy, sports medicine, and orthopedics.

The Global Diathermy Equipment Market is driven by the increasing prevalence of muscle and bone-related disorders and the rising number of geriatric populations across the world. Diathermy is commonly used in physiotherapy and rehabilitation settings to alleviate pain and promote healing in conditions such as arthritis, tendonitis, bursitis, and muscle strains. In addition, Muscle and bone-related injuries are prevalent in athletes due to intense physical activity and training. Diathermy can play a crucial role in the rehabilitation of such injuries, helping athletes return to peak performance more quickly. However, the high cost of diathermy equipment and lack of operational

expertise are going to impede the overall demand for the market during the forecast period 2024-2032.

The key regions considered for the Global Diathermy Equipment Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. In 2023, North America was the largest regional market owing to the rising incidence of chronic osteoporosis, and the growing elderly person population across the region. Chronic osteoporosis often leads to pain, particularly in the joints and bones. Diathermy can help alleviate this pain by promoting blood flow, relaxing muscles, and reducing inflammation in affected areas. According to the Cleveland Clinic Organization, more than 50 million people in the United States live with osteoporosis. Experts estimate that half of all people assigned female at birth and 1 in 4 people assigned male at birth over 50 have osteoporosis. The market in Asia Pacific, on the other hand, is expected to develop at the fastest rate over the forecast period.
