## **Abstracts**

Global Diesel Engine Management System Market is valued at approximately USD xyz billion in 2021 and is anticipated to grow with a healthy growth rate of more than 7 % over the forecast period 2022-2028. Diesel engine management system is made up of an engine control unit, relays, fuel pump, sensors, and other electrical and electronic components that all work together to ensure that the engines run smoothly. They give critical information for properly governing engine functions. Sensors, for example, offer data on the engine's operational condition, while the actuator controls it. Rising sales of diesel vehicles, rising demand for EMS for improving the performance, rising adoption of CRDi, and rising stringent emission norms have driven the adoption of Diesel Engine Management Systems across the projected period. For Instance: In April 2017, the Indian government imposed new emission standards, such as Bharat Stage (BS) IV. After implementation of these regulations, vehicle makers will be required to lower dangerous particulate matter, NOX, and CO2 levels under BS-VI. Suppliers of exhaust gas treatment products, such as petrol and diesel particle filters and selective catalytic converters, will benefit the most from the new regulations, propelling the Asia Pacific Engine Management System market even further. Also, rapid expansion of automotive industry and rising demand for fuel efficient technologies is most likely to boost the overall growth of the Diesel Engine Management System market. However, growing adoption of electric automotive and high cost of the Diesel Engine Management System can obstruct the market's expansion over the projection period of 2022-2028.

The key regions considered for the global Diesel Engine Management System market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. Europe is the leading region across the world. Growing sales of vehicle and presence of leading market players are driving the market growth in Europe. Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. The market is expected to grow during the projected period, due to rising production & sales of passenger vehicles and presence of stringent rules and regulations.
