Abstracts

Global Diesel Rotary UPS Market is valued approximately USD XXX billion in 2019 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2020-2027. Diesel Rotary UPS is the combination of battery-powered UPS and a diesel generator. It is used when the main electricity supply fails, then the stored energy in DRUPS is released to supply power without interruption. Also, at the same time the diesel engine takes over from the battery powered storage to drive the electrical generator to generate the required electricity. Hence, these DRUPS offer several advantages over battery UPS such as higher overall system energy efficiency, smaller footprint, use of fewer components, and longer technical life. Hence the additional advantages offered by these systems drive the demand for DRUPS. Further, the escalating demand for uninterrupted power specially in industries such as Data centers, manufacturing facilities, commercial buildings creates a huge market for DRUPS. As loss in power in these facilities results in loss of production. Hence the growing industries across the globe drives the market for DRUPS. For Instance: According to Cloud scene there are 1137 data centers in the Asia-Pacific of which 244 are in Australia, 200 in Japan, 119 in India and 99 in China. While, the growing manufacturing facilities across the globe also fuel the market growth. However, high maintenance and loud noises impedes the growth of the market over the forecast period of 2020-2027.

The regional analysis of global Diesel Rotary UPS market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the escalating demand for uninterrupted power and rising

awareness regarding energy saving. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027. Factors such as rising industrialization coupled with rising electricity cuts due to poor electricity infrastructure would create lucrative growth prospects for the Diesel Rotary UPS market across Asia-Pacific region.
