Abstracts

Global Dietary Supplements Market is valued approximately USD 138.74 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 8.90 % over the forecast period 2022-2028. A dietary supplement is a manufactured substance that is taken as a pill, capsule, tablet, powder, or liquid to enhance one's diet. A supplement can deliver nutrients that have been taken from food or that have been synthesised in order to boost the amount of nutrients consumed. Consumers in all regions are becoming more health-conscious, which is propelling the dietary supplement industry forward. Another significant driver expected to fuel the total market is the ageing population of various nations, such as Japan, Italy, Portugal, and Germany. Over time, the growing ageing population in various countries has boosted demand for developing age-friendly food alternatives with better nutritional content to support their overall health, which has led to an increase in demand for dietary supplements, which has fueled market expansion. According to the 2019 United Nations Globe Aging Population Report, there were 703 million people aged 65 and up in the world in 2019. In 2050, the number of elderly people is expected to increase to 1.5 billion. The proportion of people aged 65 and up in the global population climbed from 6% in 1990 to 9% in 2019. Furthermore, over the projected period, rising consumer awareness of personal health

and wellbeing is expected to be a key driving force for dietary supplements. Due to hectic work schedules and changing lifestyles, the working population around the world is challenging to meet their dairy nutrient requirements. Over the projected period, the market is expected to be driven by an increasing reliance on supplements to meet nutrient requirements due to its high convenience. However, high cost associated with Dietary Supplements care drugs impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the Global Dietary Supplements Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. Due to the high prevalence of chronic diseases in countries such as the United States, North America is expected to dominate the market throughout the projection period. Vitamins and multivitamins are increasing popularity as people turn to nutritional supplements for chronic disease prevention. Dietary supplement producers will target emerging markets in Asia Pacific and South America.
