Global Digestion Resistant Maltodextrin Market is valued approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. Maltodextrin is a digestible, artificial sugar derived from corn, rice, or wheat. Digestion-resistant maltodextrin is obtained by putting maltodextrin through an additional process that changes the bonds which connect the sugar units. Due to this new process digestion-resistant maltodextrin becomes indigestible. Digestion-resistant maltodextrin is widely used as prebiotic, which promotes the growth of good bacteria in the intestine. Growing beverages industry and increasing demand for plant-based food ingredients are key drivers for the growth of Digestion Resistant Maltodextrin market. For instance, according to global database management company Statista- in 2020, the global market of non-alcoholic beverages is estimated at USD 1.03 billion and as per estimation by the year 2025 the revenue of the global non-alcoholic drinks market would reach to USD 1.44 trillion. Also, with growing processed food industry and shifting consumers preferences towards organic products, the adoption & demand for Digestion Resistant Maltodextrin is likely to increase the market growth during the forecast period. However, side effects of Digestion Resistant Maltodextrin on certain people like allergic reactions, cramping etc. impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Digestion Resistant Maltodextrin market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World.
