Abstracts

Global Digital Oscilloscope Market is valued approximately at USD XX billion in 2019 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2020-2026. Oscilloscope is an electronic instrument used for observing constant varying voltage, that is done usually as two-dimensional plot of one or more than one signal which is represented as function of time. Oscilloscope is commonly used for displaying and analyzing the waveform of electric signals and has various applications including time and voltage measurement, differential measurement, bandwidth measurement, phase and rise time and others. A digital oscilloscope uses an analog-to-digital converter (ADC) to convert the measured voltage into digital information and then acquires these signals as a series of samples, storing them until they are good enough to be classified as a waveform. The demand for self-monitored and signal storage facilities is the factor responsible for growth of the market over the forecast period. Furthermore, the introducing new products and services as well as other strategic alliances by market key player will create a lucrative demand for this market. For instance: as per Company's news release in June 2019, Tektronix Inc. Launched 3 Series Mixed Domain Oscilloscope (MDO) and 4 Series Mixed Signal Oscilloscope (MSO), adding to its product portfolio. However, competition and economic uncertainty are the major factors restraining the growth of global Digital Oscilloscope market during the forecast period.

The regional analysis of global Digital Oscilloscope market is considered for the key

regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world due to the significant adoption of Digital Oscilloscope among end-user industries in these regions.
