Abstracts

Global Digital pathology Market is valued approximately USD 553 million in 2020 and is anticipated to grow with a healthy growth rate of more than 13.8 % over the forecast period 2021-2027. Digital pathology is an innovation that has changed the paradigm of microscope-based pathology; it is the process of digitalizing whole slide images using advanced slide scanning technology. Increasing adoption of digital pathology to enhance lab efficiency and increasing initiatives by industry players are some factors driving the market growth. For instance: As per Statista the market value of digital pathology in Latin America was forecast to reach approximately 81 million U.S. dollars by 2025, up from an estimated 50 million U.S. dollars in 2020. However, high cost of digital pathology systems impedes the growth of the market over the forecast period of 2021-2027. Also, with the advent of affordable scanners for private pathology practices, the demand for Digital pathology is likely to aggregate the market growth during the forecast period.

Global Digital pathology Market is segmented on the basis of geographical reason as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is dominating the market and is expected to witness the highest CAGR over the forecasted years.
