Abstracts

Global DNS Security Market is valued at approximately USDXX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Domain Name System (DNS) security is a suite of extension specifications that are used to protect the organization against various cyber-attacks by blacklisting malicious sites and filtering out unsolicited content. The increasing technological developments, a growing number of strategic actions such as mergers & acquisitions, product launches, etc. by the leading market players, coupled with the rising incidences of cyber-attacks are some major factors propelling the market demand across the globe. For instance, in September 2021, Whalebone entered into a partnership agreement with F-Secure with the aim of incorporating and building a multi-layered DNS security approach to prevent edge network devices and mobile devices against complex network attacks. Similarly, in August 2020, IGIT collaborated with Cisco and NS1 with the objective of providing agile DNS security application deployments for their customers across Europe, the Middle East, and the African region. Consequentially, the growing initiatives by the major market players are directly associated with the growth of the global DNS Security Market. However, a lack of awareness regarding the availability of DNS Security and rising data privacy concern impede the growth of the market over the forecast period of 2022-2028. Also, the rising demand for cloud-based DNS security software and economic growth are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global DNS Security Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the growing penetration of the DNS security solutions, along with the presence of leading network security vendors. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the growing incidences of cyber-attacks, as well as, increasing investment in R&D activities, would create lucrative growth prospects for the DNS Security Market across the Asia-Pacific region.
