Abstracts

Global Document Imaging Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2020-2028. Document Imaging is the management of documents throughout their life cycle from creation to death. It includes the capture of documents as digital images, typically by means of document scanners, and the storage, indexing, retrieval, processing, transmission, and printing of these documents. The increase in the adoption of compliance initiatives and rising penetration of smartphones has led to the adoption of Document Imaging across the forecast period. For Instance: According to IDC, online channels grew 12% YoY and contributed 48% to the total sales in 2020. However, during the festive season (Diwali), footfalls in physical stores picked up and offline channels clocked a 5% YoY growth in the fourth quarter of 2020. Also, with the requirement to reduce operating cost, the adoption & demand for Document Imaging is likely to increase the market growth during the forecast period. However, government regulations impede the growth of the market over the forecast period of 2020-2028.

The key regions considered for the global Document Imaging market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to the presence of IT infrastructure, large and Small & medium scale enterprises in the region. Whereas, Asia-Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2020-2028. Factors such as rapid adoptions of digitalization in document management infrastructure in various industrial sectors would create lucrative growth prospects for the Document Imaging market across Asia-Pacific region.
