Abstracts

Global Doppler Ultrasound System Market is valued at approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than 7.5% over the forecast period 2022-2028. Doppler ultrasonography is a non-invasive method that measures blood flow in blood vessels using high-frequency sound waves (ultrasound). A Doppler ultrasonography can identify blood clots, poor functioning of leg vein valves, heart valve abnormalities, congenital heart disease, blocked artery, reduced blood flow in legs, bulging arteries, and narrowing of an artery, such as carotid artery stenosis. The major factors bolstering the studied market growth are advances in Ultrasound Diagnostic Technologies and increasing prevalence of chronic diseases. According to the Centers for Disease Control and Prevention (CDC), in April 2022, the exact number of persons affected by deep vein thrombosis (DVT) or pulmonary embolism (PE) is unclear, DVT and PE impact 900,000 people in the United States each year. Furthermore, Vscan Air, a new wireless, hand-held ultrasound equipment from General Electric's health industry, was released in March 2021. The Vscan Air is a pocket-sized ultrasound with colour Doppler that offers customer-driven innovation that allows patients around the world to receive more tailored treatment. Also, with the rising funding by government and private agencies and rising technological advanced product, the adoption & demand for Doppler Ultrasound System is likely to increase the market growth during the forecast period. However, stringent regulatory procedures impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Doppler Ultrasound System Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is leading the market share globally, owing to easy availability of technologically advanced products and increasing chronic diseases in the United States. However, APAC is expected to be the fastest growing region due to rising prevalence of abdominal disorders coupled with strong government initiatives.
