Abstracts

Global Drainage Bottles Market is valued at approximately USD 434.6 million in 2020 and is anticipated to grow with a healthy growth rate of more than 6.0 % over the forecast period 2021-2027. Drainage bottles are used in surgeries and in the treatment of wounds such as during thoracic surgery and severe injuries. Drainage bottles are used in hospitals and clinics, homecare, and nursing facilities etc. The rising cases of accidents and severe injuries have led to the adoption of Drainage Bottles across the forecast period. For Instance: according to the World Health Organization in 2021, road accidents are increasing rapidly, approximately 1.3 million people die every year by road accidents. Road accident is the major cause of death for adults aged 5-29 years. Increasing cases of cardiovascular diseases and uremia enhance the market growth of drainage bottles. Also, with the increasing government expenditure and public awareness towards healthcare, the adoption & demand for Drainage Bottles is likely to increase the market growth during the forecast period. However, stringent government laws towards eco-friendly products impede the growth of the market over the forecast period of 2021-2027.

The geographical regions considered for the global Drainage Bottles market analysis includes Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia Pacific is dominating the market across the world in terms of huge market share due to the growing incidences of chronic diseases, increasing number of nursing homes and

hospitals etc. Whereas, Middle East and Africa are also estimated to attain a maximum growth rate during 2021-2027. Factors such as rising healthcare expenditure, increasing public awareness towards healthcare etc. would create beneficial growth forecasts for the Drainage Bottles market across Middle East and Africa region.
