## **Abstracts**

Global Drip Irrigation Market is valued approximately at USD 5 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 10.8% over the forecast period 2020-2027. water crisis is one of the major problems associated with irrigation facility around the world. Using Drip Irrigation method, water is either dripped onto the soil surface above the roots or directly to the root This saves water with the help of valve, tubing, pipe and emitters that allows controlled use of water. This method requires less amount of water, wets only the required agriculture area and can be used effectively for all soil types, also control soil erosion. The advantages of drip irrigation to provide better yield with limited water supply along with the rising population with the growing demand of agriculture products are the few factors responsible for growth of the market over the forecast period. Additionally, Government programs and subsidies driving acceptance of drip irrigation systems encourages the growth of the market. Furthermore, the introduction of products and services as well as other strategic alliance by market key players will create a lucrative demand for this market. For instance: on 05th December 2019, The Toro Company launched Toro Aqua-Traxx Azul drip tape, can optimize flow passages helps to guard the flow path labyrinth from debris and pass through more debris to maximize clog resistance and product performance. However, High initial cost of large-scale drip irrigation systems is the major factor restraining the growth of global Drip Irrigation market during the forecast period.

The regional analysis of global Drip Irrigation market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World.
