Abstracts

Global Drug-coated Balloon Catheter Market is valued at approximately USD 642.0 million in 2022 and is anticipated to grow with a healthy growth rate of more than 8.0% over the forecast period 2023-2030. Drug-coated balloon catheters, alternatively referred to as drug-eluted balloon catheters, are specifically designed medical devices used to expand narrowed coronary arteries. They are primarily utilized in the treatment of in-stent restenosis (ISR), a condition characterized by the re-narrowing of a previously stented coronary artery. These catheters are coated with a drug that is released into the artery during the dilation process, helping to prevent further blockages and promote long-term artery patency. The Drug-coated Balloon Catheter Market is being driven by factors such as the increasing prevalence of cardiovascular disorders and the rising geriatric population leading to cardiovascular diseases.

According to the World Health Organization's 2021 data, there is a projected increase in the proportion of individuals aged 60 years and older worldwide. This demographic is expected to grow from 12% in 2015 to 22% by 2050. Along with this, rising prevalence of cardiovascular diseases is further driving the market growth, according to the Centers for Disease Control and Prevention, 18.2 million adults 20 and older have a cardiac problem. Statistics show that about 805,000 Americans experience heart attacks annually. According to the US National Library of Medicine National Institute of Health,

there were 10,581 cases of cardiovascular operations conducted in 2014 and by year 2040, it is expected that this number would slowly rise to 15,501 cases, an increase of nearly 46.5%.. These figures underscore the pressing need for advancements in heart-related surgical procedures. The increasing prevalence of cardiovascular disease highlights the importance of developing innovative approaches and technologies to address this urgent global health concern. Thus, the increasing aging population and increasing prevalence of cardiovascular diseases fuel the growth of the market. In addition, rising demand for minimally invasive procedures and innovations in drug-coated balloons create lucrative opportunities for the market. However, the stringent regulatory policies related to product approval hinder the market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Drug-coated Balloon Catheter Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to the rising government expenditure on health care and the availability of various major manufacturers, the launch of new, technologically advanced devices, and favorable reimbursement regulations in the region. Asia Pacific is considered the fastest growing region during the forecasted period due to a rise in healthcare expenditure as well as an increase in the incidence of cardiovascular disorders in the region.
