## Abstracts

Global Dual Chamber Prefilled Syringes Market is valued approximately USD 121 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 7.20% over the forecast period 2020-2027. Dual chamber injectors and syringes are health devices used to store active pharmaceutical components or biological substances (such as tissue, blood or serum) that are not stable for lengthy period. These devices aid to maintain sterility of drugs before the time of injection to evade drug loss. For example, liquid proteins drugs need refrigeration before dispensing. Thus, dual chamber injectors and syringes benefits to manage proper storage condition of these drugs as proper storage of these drugs reduces the adverse effects of drug delivery. The Advancement in technology which introduces improved arrangement for liquid components in injectors drives the market growth. Also, the growing biopharmaceutical industry along with advanced manufacturing processes and integration of companies fuels the market growth. As in May 2020, Evonik announced to invest USD 27 million targeted to increase its active pharmaceutical ingredient and production capacity in Germany. While, in March 2019, Gerresheimer announced the establishment for a new plant in North Macedonia. The plant is targeted to manufacture plastic systems such as prefilled syringes. Increasing adoption of ready-to-use elastomeric syringe components by drug manufacturers is a key trend observed in the prefilled syringes market. However, risk of cross contamination impedes the growth of the market over the forecast period of 2020-2027. Although, tremendous research in order to make separable dual chamber

syringes cost effective presents a lucrative opportunity for the market.
