## Abstracts

Global Dual Chamber Syringe (DCS) Filling Machine Market is valued approximately USD 238.4 million in 2019 and is anticipated to grow with a healthy growth rate of more than 8.2 % over the forecast period 2020-2027. A dual chamber syringe is used to delivery two drugs or for the ease of use it provides with lyophilized injectable drug products. The DCS further includes technological advancements such as the usage of isolators and Restricted Access Barrier Systems (RABS), creates robust sterile manufacturing environments that effectively separate human operators from the fill-finish process. In the fill-finish manufacturing market, large number of equipment manufacturers are focusing on the production barrier isolation systems, which are integrated fill-finish machines, has the capacity of carrying out all stages of fill-finish processes. The growth in lyophilized drugs, and the growing biopharmaceutical industry are the few factors responsible for growth of the market over the forecast period. Further, the introduction of products and other strategic alliance by the market players will create a lucrative demand for the market. For instance: in February 2019, DARA Pharmaceutical launched new equipment for the processing of dual chamber syringes, vials, and cartridges in nests. This equipment is designed for ready-to-use, as it already has sterilized and ready to be processed, which does not require washing, sterilization, or special transportation. However, the high cost of isolators and Restricted Access Barrier System (RABS) is the major factor restraining the growth of global Dual Chamber Syringe (DCS) Filling Machine market during the forecast period.

The regional analysis of global Dual Chamber Syringe (DCS) Filling Machine market is

considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World.
