## **Abstracts**

Global Dust Suppression Control Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. Dust suppression control products, also known as dust suppressing chemicals or dust control agents are specialty fluids that are sprayed on the surface like roads or stockpiles to stop generation of dust. Dust control agents include various salts and polymeric emulsions. The focus on suppressing dust in construction sites with the growing construction industry, changing rules around safe dust levels in mining and quarry environments have led to the adoption of Dust Suppression Control across the forecast period. For Instance: as per the IBEF, India has a \$1.4 trillion infrastructure investment budget under NIP, with 24 percent going to renewable energy, 19 percent to roads and highways, 16 percent to urban infrastructure, and 13 percent to railways. Also, with more awareness of chemical-based dust suppressants, the adoption & demand for Dust Suppression Control is likely to increase the market growth during the forecast period. However, lack of product awareness impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Dust Suppression Control market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. Europe is the significant region across the world in terms of market share owing to the awareness regarding the advantages of using chemical or salt-based dust

suppressants. Whereas, Asia-Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. Factors such as rise in construction and mining activities in countries such as India and China would create lucrative growth prospects for the Dust Suppression Control market across Asia-Pacific region.
