Abstracts

Global E-Brokerage Market is valued approximately at USD 11.7 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 10.6% over the forecast period 2023-2030. E-Brokerage refers to the provision of financial services and the execution of financial transactions over the Internet. It involves the use of electronic platforms and online systems to facilitate buying and selling of financial instruments such as stocks, bonds, options, and other securities. The E-Brokerage market is expanding because of factors such as rising demand for online trading and growing spending in digital transformation. Investors can often perform transactions at lower fees, and they have the flexibility to manage their investments independently, without the need for direct interaction with a human broker. As a result, the demand of E-Brokerage has progressively increased in the international market during the forecast period 2023-2030.

E-Brokerage platforms enable real-time trading, allowing investors to react swiftly to market changes. The ability to execute trades promptly is crucial in volatile markets, and online platforms provide the necessary speed and efficiency. According to the Statista, the global online trading market accounts USD 10.21 billion in 2022 and projected to reach up to USD 13.3 billion by the year 2026. Furthermore, the number of users in the Neobrokers market is anticipated to reach up to 595.20 million users in number by the year 2028. Another important factor driving the E-Brokerage market is growing spending in digital transformation. Digital transformation investments contribute to the development of advanced technological infrastructure. This includes high-speed

internet, secure networks, and robust computing systems. E-Brokerage platforms heavily rely on such infrastructure to provide users with seamless, real-time trading experiences. In addition, as per Statista, in 2022, the global spending on digital transformation accounts USD 1.6 trillion and forecast to reach up to USD 3.4 trillion by the year 2026. Moreover, growing numbers of internet users and rising integration of artificial intelligence with personalized investment recommendations is anticipated to create a lucrative growth opportunity for the market over the forecast period. However, potential threat of investors data breach and government regulatory limits is going to impede overall market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global E-Brokerage Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 with largest market share owing to the adoption of high-speed internet, and mobile devices in the region. Mobile devices empower investors to monitor the financial markets in real-time, receive live updates, and access market news on-the-fly. This information helps investors make informed decisions, and the immediacy is particularly valuable in dynamic market conditions. The region's dominant performance is anticipated to propel the overall demand of E-Brokerage. Furthermore, Asia Pacific is expected to grow fastest during the forecast period, owing to factors such as rising availability of smartphones in the region. Smartphones enable users to access E-Brokerage platforms anytime and anywhere, providing unprecedented accessibility. Investors can monitor market trends, execute trades, and manage their portfolios on the go, making the process more convenient and flexible.
