## **Abstracts**

Global E-Prescribing Market is valued approximately USD 782.33 million in 2018 and is anticipated to grow with a healthy growth rate of more than 21.5% over the forecast period 2019-2026. E-Prescribing is a computer-based electronic generation, transmission, and filling of a medical prescription, captivating the place of paper and faxed treatments. With e-prescribing, healthcare provider can provide prescription information into a computer device such as laptop, tablet, or desktop computer, and securely transmit the prescription to pharmacies using a special software program and connectivity to a broadcast network. E-prescribing also helps to improve healthcare quality and patient safety by minimizing medication inaccuracies and checking for drug interactions and also make care more accessible by facilitating providers to electronically request prescription refills. Increasing emphasis on the reduction of fraud & abuse of controlled substances, growing government initiatives and incentives programs to digitalize healthcare systems, and the need to curtail surging healthcare costs are the few factor responsible for high CAGR of the market over the forecast period. For instance, the Drug Enforcement Agency's (DEA) Interim Final Rule with Request for Comment titled 'Electronic Prescriptions for Controlled Substances' [Docket No. DEA-218, RIN 1117-AA61] was issued in the Federal Register. Effective from June 2010, this regulation has had a massive effect on the prohibited use of controlled substances. The rule revised DEA's regulations to provide practitioners with the option of writing prescriptions for controlled substances electronically. Moreover, increasing healthcare expenditure and improved healthcare infrastructure in developing countries is likely to create lucrative growth opportunities to the growth of market in the

forecasting years. However, high cost of deployment, reluctance to adopt new technology and security and workflow issues are the few factor anticipated to limiting the growth of global E-Prescribing market during the forecast period.

The regional analysis of global E-Prescribing Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the increasing government initiatives and incentive programs to promote the E-prescribing system in the region. However, Asia-Pacific is anticipated to exhibit highest growth rate / CAGR over the forecast period 2019-2026 due to the healthcare organization are located in Asia are actively moving to digitalization with an emphasis on streamlining their entire workflow and ensuring patient safety.
