Abstracts

Global E-Waste Management Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. E-Waste Management Market E-Waste is referred to as electronic waste. It is used for electronic devices which include recycled, reused and used for resale. Increasing adoption of electronic devices is likely to enhance the market growth in the forecast period. According to Statista in 2022, the adoption of electronic devices is rising rapidly all over the world. The consumer electronics market is projected to attain market growth of about USD 1,056.6 billion by 2022. China is estimated to be the dominating region in terms of highest revenue generation in electronic devices i.e., USD 250.9 billion. Further, according to India Cellular and Electronics Association (ICER) in 2021, India's electronics exports are growing rapidly and doubled in the last five years. In 2019 the revenue generation reached approx. USD 15 billion from the export of electronic devices. The source also states that major export items include smartphones with impressive growth of about USD 3.8 billion in the last five years. Reduction in the life span of smart and electronic devices enhances market growth. Also, the rising stringent government regulation toward environmental safety and favourable initiatives by market players is likely to increase the market growth during the forecast period. However, increase in recycling costs incurred due to inadequacy of infrastructure impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global E-Waste Management market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. Asia Pacific

is deemed as the dominating region across the globe in terms of the highest revenue generation in the forecast period. The factors boosting the market growth across APAC are rising innovations and a constant decline in prices of smart devices. Whereas Asia Pacific is considered the fastest growing region across the region owing to the factors such as rising sales of electronic and electrical devices and growing volume of e-waste each year.
