## **Abstracts**

Global Earthen Plasters Market is valued approximately USD 86.00 Million in 2021 and is anticipated to grow with a healthy growth rate of more than 3.5% over the forecast period 2022-2028.

Earthen plasters are blends of unfired clays that are mixed with fine sand for providing a natural, breathable, and fine finish for internal walls. This is usually used on masonry, cob, or straw bale interiors or exteriors to provide a proper wall finish. The growing advantages of clay plaster over other natural plasters and increase in industrial, commercial, and residential construction activities are the primary factors that are attributed to the market demand across the globe. For instance, according to the report of Statista, the construction (including commercial and residential infrastructure) industry spending is rising year by year; in 2017, the global construction spending was accounted with the USD10.9 trillion and the amount is projected to increase to USD 12.5 trillion by the year 2030. Accordingly, rising spending on construction activity is likely to surge the demand for earthen plasters, this, in turn, augments the market growth in the near future. However, a lack of awareness regarding earthen plasters and the downsides of the use of earthen plasters impede the growth of the market over the

forecast period of 2022-2028. Also, the rising demand for green buildings and increasing investment in infrastructural projects in developing economies is anticipated to act as a catalyzing factor for the market demand during the forecast period.

The key regions considered for the Global Earthen Plasters Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. Asia-pacific is the leading region across the world in terms of market share owing to the increase in the per capita expenditure on construction activities and rapid urbanization and industrialization. Whereas, Europe is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the increasing number of construction and building activities, as well as the presence of the leading players, would create lucrative growth prospects for the Earthen Plasters market across the European region.
