Abstracts

Global Edge AI Processor Market is valued at approximately USD XXX million in 2021 and is anticipated to grow with a healthy growth rate of more than 16.0% over the forecast period 2022-2028. Edge AI processors are a type of microprocessor created specifically for speeding up embedded AI applications on edge devices. Modern technologies such as smart speakers, smartphones, laptops, drones, robotics, self-driving cars, and video analytics devices such as security cameras all require edge AI processors. Edge AI processors use field-programmable gate arrays (FPGAs), graphics processing units (GPUs), and application-specific integrated circuits (ASICs) to boost the processing speed needed for AI algorithms. The market growth is driven by rise in demand for low latency and real-time processing on edge devices and increase in enterprise workloads on the cloud. By 2021, 83 percent of chemical manufacturing companies and the government will have expanded their cloud workloads. This increase is most likely the result of efforts in response to the COVID-19 epidemic. Cloud workloads increased across all industries, except for energy, which saw output decreases during the epidemic. Furthermore, according to a survey conducted by the Cloud Security Alliance (CSA) among 200 IT and IT security leaders, 73 percent of respondents mentioned data privacy and security as their top concerns. Moreover,

growth in demand for edge computing in IoT boost the market opportunities in upcoming years. However, limited number of AI experts impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Edge AI Processor Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is leading the overall market share, owing to continuous investments in artificial intelligence-related technologies and increasing focus on having in-house AI applications production. However, APAC is expected to be the fastest growing region due to increase in demand for video analytics devices and increased digital communication by governments.
