Global Electric Tricycle Market is valued approximately USD 14.19 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 16.3% over the forecast period 2023-2030. An electric tricycle, also known as an e-trike, is a three-wheeled vehicle powered by an electric motor. It provides a means of transportation that is eco-friendly, efficient, and often designed for urban or short-distance commuting. The Electric Tricycle market is expanding because of factors such as increasing demand of energy efficient vehicles and rapid urbanization. Electric tricycles typically have a rechargeable battery that powers the motor, allowing the rider to pedal or use the electric assistance to propel the vehicle forward. They offer stability and balance with the presence of a third wheel, making them suitable for people of different ages and abilities. Electric tricycles are gaining popularity as a sustainable mode of transportation, especially for individuals looking for an alternative to cars or traditional bicycles. Its importance has progressively increased during the last few decades.

According to the Statista, in 2022, around 18 million battery electric cars (BEVs) were in use worldwide. Around 7.3 million new battery electric vehicles were introduced to the global fleet that year. Furthermore, in 2021, China's plug-in electric vehicle fleet reached around 14.1 million units. The second-ranked United States had approximately 2.96 million battery-electric vehicles and plug-in hybrid electric vehicles in use that same year. Another important component driving space increase is rapid urbanization. As per Statista, the global urbanization rate was 57 percent in 2022. North America has the highest amount of urbanization, with more than four fifths of the population living in

cities. In addition, more developed parts of the world will have 86.6 percent of their people living in cities by 2050. Also, advancements in Battery Technology and rising government regulations to encourage the use of EVs would create a lucrative growth prospectus for the market over the forecast period. However, the high cost of Electric Tricycle stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Electric Tricycle Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. Asia Pacific dominated the market in 2022 owing to the greater middle- and lower-middle-class income population, and a growing tendency for electrification of vehicles in the region. According to the Statista, by EV-Volumes, the region alone sold close to 2.96 million battery electric vehicles in 2021. Asia Pacific is expected to grow significantly during the forecast period, owing to factors such as Government of India is actively taking initiatives to promote electric tricycles in the country due to the high pollution rate caused by fuel-based vehicles in the market space.
