Global Electric Vehicle Motor market is valued approximately USD 1.98 Billion in 2018 and is anticipated to grow with a growth rate of more than 41.30% over the forecast period 2019-2026. Electric vehicle motor is an electromechanical device that enables power to electric vehicles through converting electric energy into mechanical energy. This phenomenon is achieved by the interaction of electric motors magnetic field and current. The electric vehicle motor includes end bracket, frame, bearings, rotors and stator. It offers various benefits such as zero emission, low maintenance cost, high efficiency, and automated control to the electric vehicle therefore is expected to drive over the forecast years with the increasing number of electric vehicles across the globe. Therefore, escalating demand for electric vehicles across the globe accelerate the growth of market over the forecast years. For instance: According to the International Energy Agency (IEA) 2019, the global electric car deployment has been growing rapidly over the past ten years, the global stock of electric passenger vehicle cars was passed by 5 million in 2018 with an increase of 63% from 2017. It was found that over 45% of electric cars on China's road in 2018 that is 2.3 million compared to 39% in 2017. Similarly, Europe accounts for 24% of global electric cars and United States with 22% in 2018. Whereas, favourable government initiatives regarding promotion of electric vehicles is a lucrative opportunity for the growth of market over the forecast years. However, stringent government regulation regarding approval of EV motor is expected to hamper the growth of market over the forecast years.
