Abstracts

Global Electron Beam Machining Market is valued approximately USD 175.56 Million in 2018 and is anticipated to grow with a healthy growth rate of more than 3.10% over the forecast period 2019-2026. Electron Beam Machining is a thermal machining system in which high-velocity electrons are concentrated in a narrow beam and focused at the work piece that produces heat and vaporizes the material. The electron beam machining offers several advantages over the conventional methods such as high drilling rates when small holes with large aspect ratios are to be drilled, any material irrespective of the mechanical properties can be machined and fragile and brittle materials can be processed. The electron beam machining market is also expected to grow at a rapid pace pertaining to the benefits that electron beam welding offers over the traditional welding methods. Also, the precision in welding offered by electron beam machining creates high demand in various industrial sectors such as aerospace and automotive industry. The cost effectiveness of the welding process is expected to create lucrative growth opportunities for electron beam machining market in industries with large scale production. However, high installation cost, requirement of highly trained personnel and availability of limited working space due to vacuum chamber size are few factors anticipated to hinder the growth of global Electron Beam Machining market during the forecast period.

The regional analysis of global Electron Beam Machining Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to increasing demand for EB welding technology in the automotive

and aerospace industry and the region being a major exporter of electron beam machines to the region. Europe is anticipated to exhibit highest growth rate / CAGR over the forecast period 2019-2026. Factors such as the adoption of new, precise and efficient technology and robust growth in manufacturing industry in emerging as well as developed countries that would create lucrative growth opportunities for the Electron Beam Machining market across the region.
