## **Abstracts**

Global Electronic Design Automation Tools (EDA) Market is valued approximately USD XXX billion in 2022 and is anticipated to grow with a healthy growth rate of more than XXX% over the forecast period 2023-2030. Electronic Design Automation (EDA) tools are software tools used by electronic engineers to design, analyze, and validate integrated circuits (ICs), printed circuit boards (PCBs), and other electronic systems. These tools are essential in the development and optimization of complex electronic designs, helping to streamline the design process and improve overall efficiency. EDA tools encompass a wide range of software applications that cover various stages of the design cycle, including schematic capture, simulation, synthesis, layout, and verification. These tools enable engineers to design and test electronic systems at different levels of abstraction, from high-level system design down to the transistor level. The key factor driving the market growth is rising adoption of cloud-based EDA tools, and need for improved productivity and efficiency is anticipated to support the market growth over the forecast period. Additionally, the global Electronic Design Automation Tools (EDA) Market is expanding due to the Internet of Things (IoT) and connected devices. The aerospace and defence, consumer electronics, and automotive industries are driving demand for solutions as a result of the use of these technologies that are helping in

reducing errors and design time & cost. This is expected to positively fuel the expansion for electronic design automation tools (EDA).

Moreover, the adoption of cloud-based EDA tools is anticipated to create lucrative demand for the market and influence market players to develop cloud-based tools which support the market growth. For instance, in June 2021, The HES-DVM Proto Cloud Edition (CE) was released by Aldec Inc. HES-DVM Proto CE, which is accessible through Amazon Web Services (AWS), focuses on automated design partitioning to significantly minimize bring-up time when up to four FPGAs are required to accommodate a design. It can be used for FPGA-based prototyping of SoC / ASIC designs. Additionally, growing technological advancement in EDA tools is anticipated to create the lucrative opportunity for the market during forecast period. However, the high cost of Electronic Design Automation Tools (EDA) stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Electronic Design Automation Tools (EDA) Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to the rising adoption in industries, such as consumer electronics, automotive, and increasing developments in the semiconductor industry. Asia Pacific is expected to grow significantly during the forecast period, owing to factors such as presence of key market players, growing use of advanced technologies in consumer electronics, rising demand for connected devices, and growing demand in automotive industry.
