Abstracts

Global Electrophoresis Market is valued approximately USD 2.3 billion in 2018 and is anticipated to grow with a healthy growth rate of more than 5.40% over the forecast period 2019-2026. Electrophoresis is used to separate macromolecules such as DNA, RNA and proteins in basis of their size, affinity and charge. It is most frequently used in nucleic acid and protein analysis. The major industries implying this technology are medical diagnostics, life sciences and clinical research. Electrophoresis helps in vaccine analysis, hemoglobinopathies, drug quality control, and antibody analysis. The increasing adoption of next-generation sequencing, rise in government funding for research and development and industry academic collaborations are driving the market for Electrophoresis. Further, increasing use of capillary electrophoresis (CE) with mass spectroscopy (MS) and growth in proteomics market is strengthening the growth of electrophoresis market.

The regional analysis of global Electrophoresis market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to growing focus of stakeholders on research projects on proteins, biomolecules and genes, and development of structure-based drug. Further strict regulatory requirements regarding manufacturing and quality control and processing validation is

giving the market a major boost. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2019-2026. Factors such as highest patient population pool along with increasing government initiatives on control programs would create lucrative growth prospects for the Electrophoresis market across Asia-Pacific region.
