Abstracts

Global Emotion Detection and Recognition (EDR) Market is valued approximately at USD 17.1 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 18% over the forecast period 2020-2027. Emotion detection and recognition, often abbreviated as EDR, is a technique used for assessing the human emotions through the integration of several technological capabilities, such as facial recognition, biosensing, speech and voice recognition, pattern recognition, and machine learning. Detecting and recognizing human emotions hold immense significance during the interaction process among the human and machine communication systems. This technique not only enhances the machine and human interface, but also improves the feedback process action adapted by the machines from the users, which may drive the adoption of EDR systems. Moreover, the rise in IoT application and adoption of wearable devices, rising need for advanced marketing tools, and increasing usage in smartphones are the few factors responsible for the high CAGR of the market over the forecast period. According to the International Data Corporation's (IDC) Worldwide Quarterly Wearable Device Tracker, the wearable device's shipments were estimated at 305.2 million units in 2019, which is an increase of 71.4% from 2018 which holds almost 178.0 million-unit shipment. Also, the IDC predicted that the total shipment of wearable devices around the world will grow to nearly 500 million units by the year 2023, resulting in a compound annual growth rate (CAGR) of 22.4%. This exceptional growth was majorly witnessed by the proliferation of hearables that captures around 55.3% share of the entire market.

This, in turn, is expected to create huge demand for Emotion Detection and Recognition (EDR) all over the world. However, the high cost of application along with the data security & privacy concern are the major factors restraining the market growth over the forecast period of 2020-2027.

The regional analysis of the global Emotion Detection and Recognition (EDR) market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the increasing investment & funding on Internet of Things (IoT) technology, along with the presence of a significant number of market vendors in the region. Whereas Asia-Pacific is anticipated to exhibit the highest growth rate / CAGR over the forecast period 2020-2027. Factors such as the increasing popularity of wearable technology, along with the rapidly growing demand for smartphones in developing nations, such as China and India, would create lucrative growth prospects for the Emotion Detection and Recognition (EDR) market across the Asia-Pacific region.
