## **Abstracts**

The global Endometriosis Treatment Market reached USD XXX Billion in 2020. The Global Endometriosis Treatment Market tends to grow by a CAGR of XX% in the 2021-2027 period.

When tissues that make up the lining of the uterus, grow outside of it, the disorder is called endometriosis. In Endometriosis, women face pain in the lower abdomen, cramps, and sometimes a high flow of blood. Endometriosis is divided into stages between level 1 (minimum or starting stage) to level 4 (severe or extreme stage). The established player has odds in their favor to lead the market and also expand their business portfolio by launching higher efficient and well-tested drugs into the market. One of the major trends that are driving this market is the awareness among women health and safety and governments investing into better treatment facilities and upgraded technologies used to reduce these diseases. Patient assistance programs are also spreading widely among various regions. However, limited availability of diagnostics is a major factor affecting this market negatively, but diagnostic facilities are expected to increase in the future. The ultrasound market is going to cover the largest market share, due to the upgradation in the technology and growing demand for diagnostic procedures. In 2018, Astellas Pharma announced the manufacturing of Opigolix drug that will be used for oral treatment of endometriosis.

The key regions covered in the global Endometriosis Treatment market are North America, Latin America, Europe, East Asia, South Asia-Pacific, and the Middle East & Africa. North America holds the largest market share, because of growing awareness about endometriosis treatment and the rate of incidences growing rapidly in that region. Due to higher population, growing market, and a large number of market players being present in the market, the Asia Pacific region is expected to grow in the future.
