Global Endoscopy Devices Market is valued approximately at USD 41.0 Million in 2020 and is anticipated to grow with a healthy growth rate of more than 7.3% over the forecast period 2021-2027. The global Endoscopy Devices market is being driven by rising geriatric population, increase in prevalence of cancer, increasing preference for minimally invasive or keyhole surgeries. Furthermore, the growing emergence of endoscopic bariatric surgery, will provide new opportunities for the global Endoscopy Devices industry. For instance, according to the Administration on Aging (AoA) in year 2019, about 16% of the total population in U.S. were aged more than 65 years and it is anticipated that this number is expected to rise to 21.6% by year 2040. Also, according to the Globocan report 2020, the incidences of cancer has been reached to 19.3 million and it is anticipated that the figure will reach to 21.9 million by year 2025. As a result increased geriatric population and rising prevalence of cancer will serve as a catalyst for the endoscopy devices industry in the future. However, lack of awareness and low adoption of disposable endoscopes in hospitals and diagnostic centers may impede market growth over the forecast period of 2021-2027.

Asia Pacific, North America, Europe, Latin America, and Rest of the World are the key

region considered for the regional analysis of global endoscopy devices. Rising adoption of advanced technologies, growing preference for minimally invasive surgeries for reducing overall healthcare spending, and enhanced healthcare infrastructure makes the North America the leading region across the world in terms of market share.

Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027, due to growing geriatric population and improving health infrastructure the presence of key players along with the constantly developing start-up landscape in the region is further promoting the market growth.
