## **Abstracts**

Global Endoscopy Procedure Market is valued at approximately USD 27.31 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 7.50 % over the forecast period 2022-2028. Endoscopy Procedure is a procedure in which a long, flexible tube (endoscope) is inserted down the neck and into the esophagus during an endoscopic operation. The doctor can then check and track your digestive tract, using a tiny camera fixed at the end of the endoscope. Rising demand for endoscopy in the medical industry, rising investments initiatives by government, and rising healthcare sector in developing countries with emerging economies has led to the adoption of Endoscopy procedure across the forecast period. For Instance: In 2020, as per the reports of the World Economic Forum, emerging nations will account for around one-third of Global healthcare spending, with India and China accounting home to more than half of the world's population, having the biggest number of patients. Also, rising partnerships and collaborations offering lucrative growth are most likely to boost the overall growth of the Endoscopy Procedure Market. However, high cost of Endoscopy Procedures and high risk of infection and transmission can obstruct the Market's expansion over the projection period of 2022-2028.

The key regions considered for the Global Endoscopy Procedure Market study include

Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world.
