Abstracts

Global Enteral Feeding Formulas Market is valued approximately at USD 5.95 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 6% over the forecast period 2021-2027. Enteral feeding formulas are for the people who are not able to eat or digest normally due to a condition or injury that prevents eating a regular diet by mouth. Rising trend of preterm births is growing the demand in the market. Growing prevalence of chronic diseases such as cancer and diabetes, new product launches by private players and rising geriatric population around the world is growing the demand for enteral feeding formulas in the market. For instance, according to American Cancer Society, the number of new cancer cases in United States was 1,762,450 which was expected to reach 1.8 million in 2020. Also, in 2020, Victus, Inc. launched Abintra Care, a specialized nutrition that can support the immune system. Furthermore, technological advancements in products and growing preference for consumption of disease specific formulas are expected to fuel the growth in near future. However, lack of awareness for clinical nutrition in medical and healthcare community and complications associated

with enteral feeding may hamper the growth during forecast period.

Asia Pacific, North America, Europe, Latin America, and Rest of the World are the key region considered for the regional analysis. North America is dominating across the world in terms of revenue due to growing burden of chronic diseases such as cancer, diabetes and other neurological conditions. Whereas Asia Pacific is anticipated to exhibit the highest growth rate over the forecast period 2021-2027, due to growing number of preterm birth and improvement in healthcare infrastructure.
