Abstracts

Global Enterprise information archiving Market is valued at approximately USD 6.7 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 11.60% over the forecast period 2023-2030. Enterprise information archiving (EIA) software incorporates products and solutions for archiving user message material, including data from public and company social networking sites, email, instant messaging, and SMS. Other content categories are also included in this, such as files, website content, speech, and data kept on enterprise file synchronization and sharing (EFSS) platforms. EIA solutions offer tools for e-discovery and categorization, content indexing, retention management, and data reduction across all content types. The market growth is driven by key factors such as increasing data generation across various organizations and growing demand for cost-effective storage.

For instance, according to the Gartner CIO study 2019, 20% of participants feed their analytics and business intelligence (BI) systems with data from 1000 or more sources. Additionally, an organization uses data from 400 sources on average. According to (International Data Corporation) IDC, the amount of data generated globally is expected

to exceed 175 zettabytes (ZB) by 2025. This is clear from a study finding that revealed an organization deals with an average monthly rise in data volume of 63%, with 12% of respondents reporting a growth rate of 100%. Moreover, increasing the adoption of enterprise archiving solutions and the growing adoption of different technologies such as artificial intelligence (AI), and machine learning create lucrative opportunities during the forecast years. However, less expertise and awareness of enterprise information archiving stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Enterprise Information Archiving Market study include Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America is leading the global market share owing to the early adopter of the latest technological advancements and stronghold of information archiving vendors. On the other side, Asia Pacific is expected to be the fastest growing regional growth due to rapid expansion of domestic enterprises and rapidly growing economies such as China, Japan, and India.
