Abstracts

Global Epoxy Tooling Board Market is valued approximately at USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5% over the forecast period 2021-2027. Epoxy tooling boards are commonly used in high-temperature applications and serve an important role in the production of composite components. Furthermore, epoxy tooling boards are utilized in a variety of end-use industries to create durable and reusable tools, prototypes, models, and patterns, primarily in transportation, including motorsports, aerospace, marine, and general composite industries. The market is driven by rising demand for the prototypes of formula one car and aircraft and increasing R&D for efficient electric vehicles. For instance, as per Statista, in 2023, it is expected that Chinese suppliers will invest USD 10 billion in R&D efforts related to electric vehicles. Furthermore, new product launches are boosting the market growth further. For instance, Trelleborg A.B, a company located in the United Kingdom, offers seven different types of tooling blocks. Because of its low density and dimensional stability, the TB650 is used by approximately 75% of Formula 1 teams. In addition, in 2020, the company introduced the TC760X, a dust-free, ecofriendly tooling board. However, emerging mined mineral composite materials, may impede market growth over the forecast period of 2021-2027.

Europe is dominating the market share of epoxy tooling boards as Germany and Belgium are the main manufacturer of polyurethane as a raw material. Furthermore, the region is heavily governed by different rules and legislation, forcing industries to follow strict criteria in order to maintain overall sustainable growth. Due to the presence of

important markets such as aerospace and defence, automotive, and wind energy, Asia Pacific became the second-largest regional market and is anticipated to expand significantly during the projection period.
