Abstracts

Global Eubiotics Market is valued approximately USD 4.2 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 8.2% over the forecast period 2021-2027. Eubiotics are projected to be the most important feed supplement, filling the left space by the antibiotic restrictions. The ability to fill on this gap is important to the success of eubiotics, as antibiotics, despite their environmental consequences, offered critical capability to the meat-processing sector. Increasing demand from the livestock sectors and increasing demand for meat production are factors contributing to the market growth. For instance: according to FAO (Food and Agriculture Organizations of the United States), the global meat production went up to 336.4 million tones in 2018 from 332.4 million tones in 2017. However, increasing government regulations and high complexities in the regulatory assembly and increasing diseases from livestock farming impedes the growth of the market over the forecast period of 2021-2027. Also, increasing need towards saving cost and various technological advancements in the eubiotics market is likely to increase the growth of the market in the forecasting period.

The regional analysis of global Eubiotics market includes Asia Pacific, North America, Europe, Latin America and Rest of the World for analysis and estimation, North America is a significant region in terms of market share, across the world owing to increasing technological innovations. Whereas, Europe is anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as increasing demand for livestock farming would create lucrative growth prospects for the Eubiotics market across European region.
