Abstracts

Global Extended Detection and Response Market is valued at approximately USD 827.04 million in 2021 and is anticipated to grow with a healthy growth rate of more than 19.1% over the forecast period 2022-2028. Extended Detection and Response is a cybersecurity technology that is used to monitor and mitigates cyber security threats and present extended analysis, visibility, and response in networks and clouds. The evolving cyber threat landscape, the rising shift from EDR to XDR, the growing need for real-time monitoring, visibility, analysis, and response across security stacks, and increasing product launches are fueling the market demand across the globe. For instance, in April 2022, Bitdefender introduced GravityZone XDR- a native XDR solution, which is designed to offer out-of-the-box analytics, high-security context, and correlation of disparate alerts. The product offers features such as recommended threat response actions, automated threat identification & prioritization, and rapid cross-correlation threat detection. Therefore, the increasing launch of technologically advanced products is augmenting the market growth in the impending years. However, issues associated with the XDR deployment and lack of awareness about XDR and the vendor-lock-in period impede the growth of the market over the forecast period of 2022-2028. Also, increasing use of ML/AI-powered XDR services and growing adoption of managed XDR are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Extended Detection and Response Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the

World. North America is the leading region across the world in terms of market share owing to the growing investment in research & development activities and rising incidences of cyber threats. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the increasing number of data breaches, as well as development of the IT sector, would create lucrative growth prospects for the Extended Detection and Response Market across the Asia-Pacific region.
