Abstracts

Global External Catheter Market is valued approximately USD XXX million in 2020 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2021-2027. An External Catheter is used to drain urine from the bladder in individuals who are unable to do so naturally. These catheters are only intended to be used for a short time. These are prescribed for bladder disorders such as urine leakage, incontinence, and other bladder issues. Urinary incontinence can be caused by neurogenic bladder illnesses such as spinal cord damage, multiple sclerosis, or spina bifida, as well as non-neurogenic bladder diseases. The periodic catheter is inserted into the urethra, and urine is collected using the catheter hose into the collection bag. After emptying the bladder, the catheter should be withdrawn. As the frequency of CAUTIs, which are mostly linked to indwelling catheters, rises, the worldwide external catheter market is expected to grow quickly. External catheters are always the first choice for patients who choose self-catheterization in instances of urinary incontinence or urine leakage. Urinary incontinence affects one-half to one-third of men and women in the United States, according to the American Urological Association. In addition, over 200 million people globally suffer from urine incontinence. According to the Centers for Disease Control and Prevention, over 75% of UTIs acquired in hospitals in the United States were linked to a urinary catheter. Increasing demand for minimally invasive treatments and devices throughout the world, as well as increased awareness and affordability among consumers, especially in emerging nations, are likely to boost the external catheter market over the forecast period. Furthermore, since the frequency of chronic diseases, cardiovascular and urological disorders, and diabetes has grown,

catheter demand has expanded across the health-care business. However, the market's growth would be hampered by leakage concerns in external catheters throughout the projected period of 2021-2027.

The major regions of Asia Pacific, North America, Europe, Latin America, and the Rest of the World are included in the geographical analysis of the worldwide External Catheter market. Because of its well-established healthcare infrastructure and high healthcare expenditure per capita, North America is the world's leading region in terms of market share. Whereas, Asia-Pacific is expected to grow at the fastest rate during the forecast period, owing to rising health-care spending and the rapidly rising prevalence of various urologic diseases, which will provide lucrative growth opportunities for the External Catheter market in the Asia-Pacific region.
