Global extruders market to reach USD 12 billion by 2027.

Global extruders market is valued approximately at USD 8.9 billion in 2020 and is anticipated to grow with a healthy growth rate of about 4.4% over the forecast period 2021-2027. Extruders are machines that are used for the production of long continuous products such as tire treads, tubing, wire coverings and others. These machines are also used for the production of various profiles that can be further cut to length. A range of extruders are available such as single-screw, twin-screw and ram extruders. The demand for extruders is expected to be highest in the building & construction sector. Increasing demand for extruded products such as door frames, windows, space frame systems, curtain walling, canopies, roofing & exterior cladding, and arches is driving the extruders demand in the building & construction sector. The global extruders market is being driven by high investment in building & construction industry and growing demand for plastic and metal products. Furthermore, rise in automation will provide new opportunities for the global extruders industry. As per Statista, the total spending in the construction industry across the globe is expected to increase from USD 9.5 trillion in 2014 to approximately USD 19.2 trillion by 2035. Such growth in the construction spending across the globe is expected to increase the demand, adoption and application of extruders in the building and construction sector and hence promote the market growth. However, high initial and maintenance cost of machines may impede market growth over the forecast period of 2021-2027.

The regional analysis of the global extruders market is considered for the key regions

such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. Asia Pacific accounts for the largest share in terms of market revenue in the global extruders market over the forecast period 2021-2027. Factors such as high economic growth rate, heavy investments across industries such as automotive, infrastructure, oil & gas, chemical, and electronics, expansion of building & construction industry, low cost of production, etc. contribute towards the largest market share of the region in the forecast years.
