## **Abstracts**

Global Eyelid Surgery Market is valued approximately at USD 3.69 Billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5.8% over the forecast period 2021-2027. Eyelid Surgery is performed to remove excess fat and skin present in the eyes to improve the skin elasticity, eyelids and appearance. The global Eyelid Surgery market is being driven by growing consciousness for the attractive visual appearance which includes removing wrinkles by improving skin elasticity and reducing puffiness of the eyes through surgery. The other driving factor for the market growth is the increase in aged population, as the people get older, they tend to have more loose and sagging skin in the eyelids. For instance, according to the United Nations, the above age 60 global population increased more than twice from 1980 to 962 million in 2017, and is expected to reach nearly 2.1 billion by 2050. Furthermore, the growing demand for non-invasive surgeries, continuous technological advancement and rise in the demand for cosmetic surgeries will provide new opportunities for the global Eyelid Surgery industry. However, rise in complications related to surgeries and risk associated with the scarring, swelling and bruises may impede market growth over the forecast period of 2021-2027.

The major regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World are segmented on the basis of regional analysis of the global Eyelid Surgery Market. North America is the leading region across the world in terms of market share due to availability of advanced facilities and increase in geriatric population in the region. Whereas Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2021-2027, due to the rising social media influence, awareness

regarding physical appearance and rising demand for surgeries in the region.
