## **Abstracts**

Global Faecal Extraction System Market is valued approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2021-2027. Faecal extraction system is device which is used for collecting stool samples for the purpose of stool test, it is helpful in detection of any virus or other type of parasitic foreign particle present in the stool. Growing prevalence of IBD disease and rising application of Stool test are key drivers for the growth of Faecal Extraction System market. According to Cleveland Clinic (A US based Medical Center) – as of 2020, 1 in 250 people in North America and Europe are affected to Ulcerative colitis and Crohn’s disease, both are type of inflammatory bowel disease. Ulcerative colitis can occur in people of any age, but it generally starts between the ages of 15 and 30, and less frequently between 50 and 70 years of age. Also, with the increasing healthcare industry in emerging economies, the adoption & demand for Faecal Extraction System is likely to increase the market growth during the forecast period. However, high cost of Faecal Extraction System and negative impact of covid 19 on end use industries impede the growth of the market over the forecast period of 2021-2027.

The key regions considered for the global Faecal Extraction System market study includes Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to increasing government expenditure on healthcare system and presence of well-established healthcare infrastructure. Whereas Europe is anticipated to exhibit highest growth rate / CAGR over the forecast period 2021-2027. Factors such as increasing prevalence of inflammatory bowel diseases in the region would create lucrative growth prospects for the Faecal Extraction System market across Europe region.
